

TRUE™ Analysis

UNCOVER THE TRUTH

We are leveraging software and interpreting data accurately to maximize the well delivery value. Volant's well planning and construction methods help promote long-term tubular integrity through the optimal use of readily available field data.

Volant's Tubular Running Efficiency (TRUE™) Analysis accurately analyzes key performance indicators (KPIs) for casing running. The KPI program breaks the casing running data into segments and reports the distribution of time used during each cycle, thus eliminating uncertainty regarding the characterization of rig time utilization. Opportunities for improving in-slip efficiency are highlighted to provide an effective training tool for future runs.

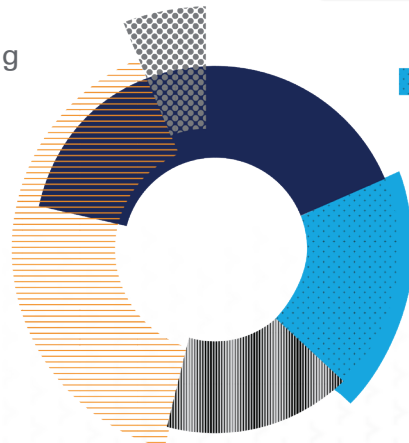

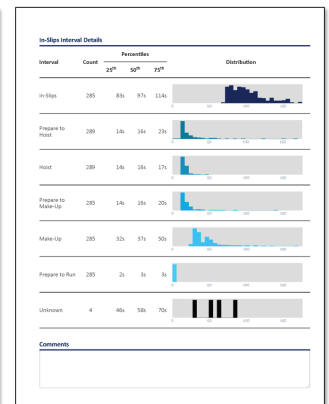

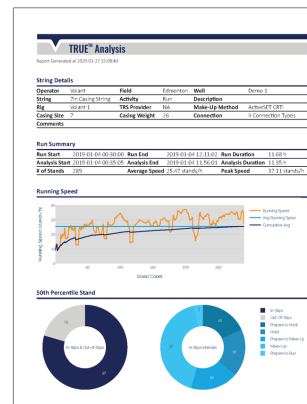

TRUE Analysis is a visually comprehensive report illustrating post-run analysis and data trends, highlighting inefficiencies and opportunities for improvement. Whether using traditional casing installation services or advanced casing running tools, this report will help eliminate invisible lost time (ILT) and guide future run goals and operational action plans.

FEATURES & BENEFITS

- Uses readily available rig EDR (electronic drilling recorder) data to analyze in-slip casing running efficiencies.
- Generates comprehensive KPI reports that describe where time is being spent.
- Helps drilling teams identify areas where in-slip efficiency can be gained.
- Eliminates uncertainty regarding the characterization of rig time utilization.
- Helps improve the speed and accuracy of decision making and enhance operational efficiency.
- Eliminates invisible lost time (ILT)

- Quick data processing
- ▨ Valuable training tool
- ▨ Fact-based analysis
- Visually comprehensive report
- ▨ Effective decision making
